

The Value Stream Mapping Workshop provides attendees with the basic tools for detailed process mapping and analysis. Create your process improvement master plan with this powerful assessment and planning tool.

A Value Stream Map is a graphic representation of the flow of materials and information through your operation. It provides a system level view of your business, highlighting the opportunities for improvement. This snapshot of your current-state is used to help you to envision and define a future-state with enhanced performance. This tool will guide you to a list of initiatives that will steadily move you toward that future-state.

This one-day workshop covers:

- Benefits and uses of Value Stream Mapping
- The language and symbols used to develop a Value Stream Map
- Examples of Value Stream Mapping
- Sample results achieved with Value Stream Maps
- Creating current-state and future-state Value Stream Maps.

This interactive workshop demonstrates how to utilize Value Stream Mapping to build a primary tool for business process analysis and improvement. This tool can be applied to diverse administrative and professional processes plus transactional activities. You will learn how the key elements of Lean thinking and Value Stream Mapping apply to such activities. Participants will identify key processes to tackle, draw an accurate current-state map of each process, define the value in each step, eliminate non-value-add Waste, apply Lean principles to prioritize Lean improvement tasks for each process, and implement process change in a way that can be supported by your internal resources and sustained over the long-term by the organization.

Program at a Glance

Value Stream Mapping

- ◆ 1 Day On-Site Workshop that could alternately be delivered as a Webinar.
- ◆ Who should attend:
 - * Prospective Lean Team Members
 - * Managers
 - * Line Supervisors
 - * Team or Group Leaders

Benefits & Outcome

- ◆ Be able to create, read, and interpret a Value Stream Map
- ◆ Understand the steps of the Value Stream Mapping process
- ◆ Understand how a Value Stream Map can be utilized to identify improvement priorities in any business process

The Facilitator

GEP Business Solutions brings more than just theoretical concepts to this workshop. We bring years of hand-on experience with the 3 critical components of business enhancement: process improvement, systems integration, and organizational development / change management. These skills allow us to convey a balanced approach to organizational enhancement success.
